Dust mite allergy, also known as house dust allergy, is a sensitization and allergic reaction to the droppings of house dust mites. The allergy is common and can trigger allergic reactions such as asthma, eczema or itching. It is the manifestation of a parasitosis. The mite’s gut contains potent digestive enzymes (notably peptidase 1) that persist in their feces and are major inducers of ...
Participants were individuals who received at least 1 of the following International Statistical Classification of Diseases and Related Health Problems, Tenth Revision anaphylaxis codes: T78.2XXA, T80.52XA, T78.2XXD, or E949.9, with documentation of COVID-19 vaccination. Suspected allergy cases were identified and invited for follow-up allergy
If you submit to a journal that offers free format, either directly or by accepting an invitation to transfer your manuscript to that journal, you don’t need to worry about formatting requirements. You can submit your manuscript in the format of your choice, and Wiley will update the formatting for you into journal style when your manuscript is reviewed.
